USB Universal Reader

Universal Serial Bus

If you own digital appliances – digital cameras, video camcorders, portable music players, personal digital assistants (PDAs) or voice recorders – that use different flash memory types, the SmartDisk Universal Reader is for you. This sleek and stylish media reader reads and writes to SmartMedia, CompactFlash, Memory Stick, Secure Digital, MultiMediaCard and IBM Microdrive memory cards from one unit.

Save on batteries

Direct cable connections can drain the batteries from your digital appliances as you transfer data. Use a SmartDisk Universal Reader instead to extend the battery life of your digital appliances. The SmartDisk Universal Reader is powered by your computer, so it doesn't require its own external power source.

Transfer at "USB speed"

The SmartDisk Universal Reader is up to three times faster than a direct camera connection. For example, you can transfer 32MB of digital data in approximately 30 seconds!*

No software installation required

The SmartDisk Universal Reader is a "Mass Storage Class" device, which means that no software installation is required on systems using Windows 2000, Me or XP and Macintosh OS 10 1.2 and higher. Just plug it in and it's ready to use. Driver installation for other operating systems takes just a minute or two.

Unique, sleek design

The SmartDisk Universal Reader features a one-of-a-kind design that makes it easy to insert and remove your flash media cards or IBM Microdrive disk drives. Plus, the unit requires very little desk space and complements today's computer designs.

Technical features

- Fast USB 1.1 data transfer rates
- Detachable cable
- Swappable USB connector between PC/Mac USB port or USB hub
- Support for Windows and Mac operating systems
- LED light to indicate operating power

System requirements

For Windows:

- Windows IBM PC/AT compatible
- Pentium-compatible with USB port
- Windows 98/Me/2000/XP

For Macintosh:

- iMac or Macintosh with USB port
- Macintosh OS 8.6, 9.x and 10.1.2 and higher

* Results vary, based on your system configuration.
